

Dire Wolf *Aenocyon Dirus*

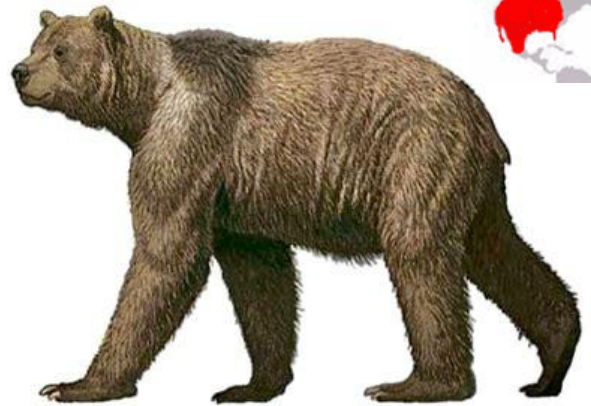

Height: 2ft 7in at shoulder **Weight:** up to 150 lbs

Slightly larger and more robust than modern grey wolves, the dire wolf was a canid carnivore that once roamed Arkansas and many of the lower 48 states, as well as further south into Central and South America.

Status: Extinct **Last Seen:** about 13,000 years ago

Giant Short-Faced Bear *Arctodus Simus*

Height: up to 6ft at shoulder **Weight:** up to 2,250 lbs

Once common in the Ozarks, the short-faced bear was the largest and most powerful land predator in North America. Taller than modern bears, with longer limbs and forward facing toes, it is believed this bear was built to chase its prey to exhaustion, running up to 40mph. Reared up onto its hind legs, it stood up to 12 feet tall and likely preyed on large herbivores like ground sloths, horses, and bison.

Status: Extinct **Last Seen:** about 11,000 years ago
