

Mortal Kombat Menpos

From Mortal Kombat

By Thomas Hanna

I made this template for making the Scorpion/SubZero/Reptile menpo from Mortal Kombat. Please feel free to make any modifications you would like.

- Cut out all the pieces of the template and trace them onto the material of your choice (I used 6 mm and 10 mm EVA foam)
- Most of the parts contain registrations marks, which look like little V's on the edges. These marks are to help you keep the shape aligned and force the foam into a curve. You trace these onto the foam, you do not cut them.
- There are larger darts on some of the parts (Jaw & Mouth), these are to be cut into those parts to allow that area to curve.
- If a part has the word right or left followed by an asterisk *, these part needs to be duplicated on you material by turning it label side down to make the opposite side. The dome top and sides are an example of these.
- You could certainly try and make it out of other thicknesses of EVA, I chose 6 mm because I needed the parts to be sturdy but still have enough flexibility for me to curve into shape.
- The second page of the template contains three variations to the mask. Select the cheek and corresponding mouth pieces to make the specific characters menpo.
- Some adjustments and reductions in size may be needed in order to fit smaller heads.
- Along with the EVA/craft foam you will need: metal mesh, contact cement, super glue, a rotary tool, rotary sanding bits, scissors, xacto or box cutter, Plasti dip or something to seal it with, spray paint, and acrylic paints.

Hopefully this is helpful and keep in mind it is a free template (so please don't be judgmental). Share this with everyone you know. I spend a lot of extra time making these templates and would love to be tagged in photos of your end results on social media. And inevitably someone is going to ask you, HOW did you make that? Give them one of these  and tell them MUCH PROPS.
