

# PLAGUE LANTERN

From MY IMAGINATION 😊

By Thomas Hanna

I made this template for making a lantern that goes along with my Plague Doctor Cosplay. Please feel free to make any modifications you would like.

- Cut out all the pieces of the template and trace them onto the material of your choice ( I used 10 mm, 6mm and 24 mm EVA foam)
- This build was built around an oversized Christmas light that I picked up at Walmart. So adjustments would need to be made if using something else.
- Some of the parts have blue highlighted edges. This means that those edges need a 45 degree angle cut on the.
- If you see a part with a X followed by a number, that means you need multiple copies of the same piece.
- You could certainly try and make it out of other thicknesses of EVA, I chose 10 mm because I needed the parts to be sturdy but still have enough flexibility for me to curve into shape.
- Along with the EVA foam you will need: oversized Christmas light, 24 mm EVA square dowels, LED Puck light with remote, plastic chain, small plastic skeletons for decorations, apple sauce lids for decorations, contact cement, super glue, a rotary tool, hot glue, rotary sanding bits, woodburning tool, scissors, xacto or box cutter, Plasti dip or something to seal it with, spray paint, and acrylic paints.

Hopefully this is helpful and keep in mind it is a free template ( so please don't be judgmental ). Share this with everyone you know. I spend a lot of extra time making these templates and would love to be tagged in photos of your end results on social media. And inevitably someone is going to ask you, HOW did you make that? Give them one of these  and tell them MUCH PROPS.

10mm
